The Future is **Smart Therapy Management**

Smart therapy management uses the best of connected health technology to improve compliance with prescribed treatment goals.

Smart therapy management relies on a connected medical device to create a cloud-based ecosystem where patients, physicians, therapists, families and caregivers can contribute to the success of an individual patient's therapy goals. The powerful data analytics, technology integration capabilities, and ability to break down silos across care teams has the potential to create a more cost-effective approach to therapy management that improves outcomes and the quality of life for patients.
